Powerful Collaboration – To and From the Edge...

Mutualink's Edge puts the power of Mutualink's collaboration suite where the users are: in the office, on the road, in the street. Using the flexible architecture of the Mutualink Edge platform, Edge@Command™ and Edge@Hand™ applications enable the sharing of radio, voice, video, data and text communications, within and among agencies and jurisdictions. Today's mobile environment demands an interoperable communication solution for a changing world.

Edge@Command™ provides the full functionality of the command center with the convenience of access from whatever device best suits your organization's workflow. Create and manage several collaboration sessions simultaneously, on whatever device you choose, whether Windows-based or iOS. Contribute your organization's communication resources to sessions, and benefit from the information shared by others.

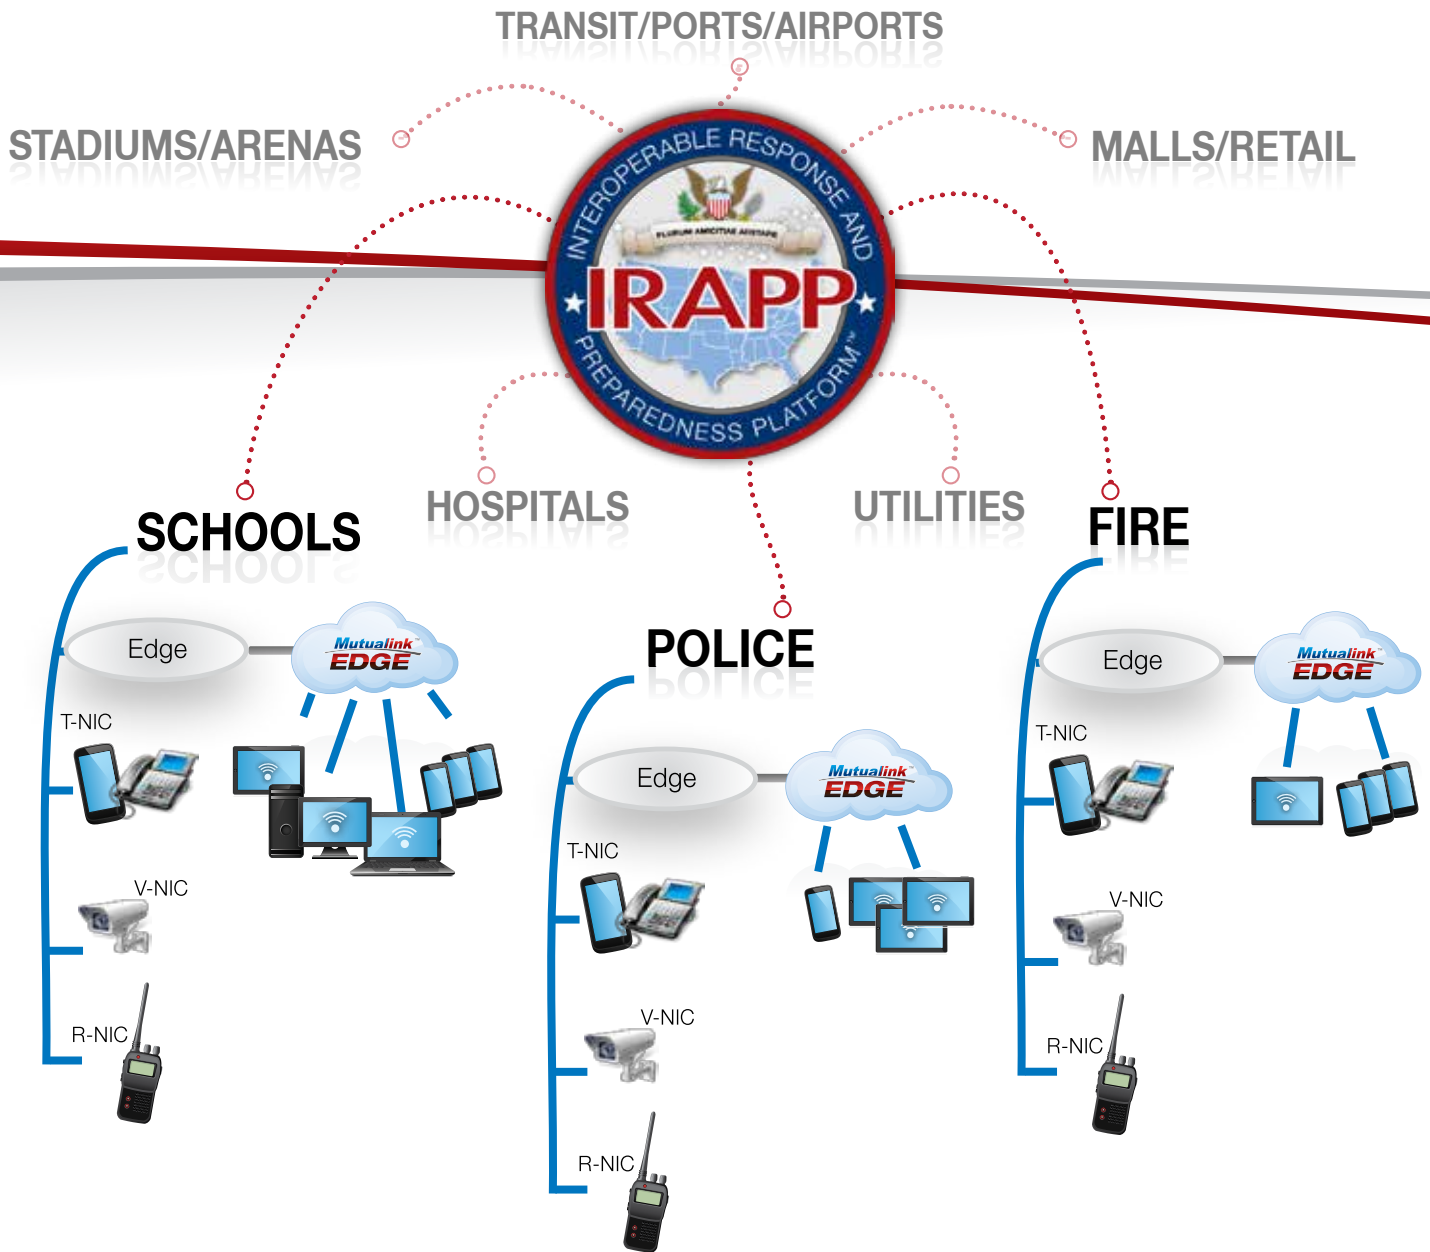

Edge@Hand™ brings Mutualink's communications collaboration capability into the field. In an emergency situation, or every day, users can instantly create a multimedia communication session within the organization. Streamlined functionality encourages use at all levels of the organization.

Think of Edge@Command as reaching horizontally across agencies and jurisdictions, and Edge@Hand as reaching vertically through an organization. Mutualink's Edge takes your organization's communications from the enterprise to the Interprise.
